PROFILE

Final-year Cybersecurity engineering student at ENSA Tangier seeking a six-month internship starting in February 2027. Deployed and integrated a complete SOC/SOAR lab (Wazuh, Shuffle, TheHive 5, Cortex, MISP) and implemented security checks in GitHub Actions CI/CD pipelines. Seeking to apply this experience to security solution integration and workflow automation.

EDUCATION

ENSA Tangier – National School of Applied Sciences — Tangier, Morocco
Engineering degree in **Cybersecurity and Cyber Intelligence** — 2024 – present
Expected graduation: 2027 · Degree program taught entirely in English

PROFESSIONAL EXPERIENCE

Intelcia Tech – *Cybersecurity and SOC Automation Intern* — Jul. – Sep. 2026 · Casablanca

- **Security tool integration:** deployed a lab on 3 Ubuntu Server VMs using Docker Compose (Wazuh, Shuffle, TheHive 5, Cortex, MISP); developed 3 Wazuh detection rules for UFW and Apache logs.
- **Workflow automation:** built 2 Shuffle SOAR workflows to extract observables, group alerts and automate TheHive 5 case creation and updates, including deduplication and notifications.
- **Enrichment and prioritization:** integrated Cortex and MISP to enrich observables and automatically adjust case severity based on indicators.
- **Testing and documentation:** validated 2 attack scenarios in the lab and wrote a technical report in English.

DHL Express – *IT Support and Systems Administration Intern* — Jul. – Aug. 2025 · Casablanca

- Provided user support for hardware, software and LAN/Wi-Fi issues; installed Windows workstations and maintained IT asset records in the CMDB.

TECHNICAL PROJECTS

Web Application Security and DevSecOps Lab — May 2026

- **CI/CD pipeline security:** implemented a GitHub Actions pipeline with Bandit (Python SAST), Safety (SCA) and Gitleaks (secret detection).
- **Application security:** exploited 4 web vulnerabilities (SQL injection, XSS, command injection and path traversal), reviewed fixes, tested a WAF and documented a simulated incident using JSON logs. Python/Flask, Docker, OWASP ZAP.

DevOps Task Manager – CI/CD and Deployment — Academic project

- Automated tests and Docker image builds with GitHub Actions; deployed a Node.js/Express API and MongoDB locally using Docker Compose, with environment variables and a database volume.

HTB Simple Encryptor – Decryption in Rust and C — CTF project

- Developed a Rust solver to extract a little-endian seed, reproduce the C pseudorandom number generator through FFI, and reverse XOR and bit rotation operations to recover the plaintext.

E-Blog – Web Publishing Platform — Laravel, MySQL, Blade, Tailwind CSS

- Implemented article management, image handling and search, with authentication, input and file validation, password hashing and CSRF protection.

TECHNICAL SKILLS

Detection and incident response: Wazuh (SIEM/XDR), TheHive, Cortex/MISP (Threat Intelligence), detection rule development, alert triage, case management.
Automation and orchestration (SOAR): Shuffle, playbook design, REST APIs, webhooks, IoC enrichment, alert deduplication.
DevSecOps and CI/CD: GitHub Actions, SAST (Bandit), SCA (Safety), secret detection (Gitleaks), automated testing.
Application security: OWASP ZAP, OWASP Top 10, WAF, authentication, input validation, CSRF protection.
Infrastructure and systems: Docker, virtualization, Linux and Windows administration, TCP/IP networking.
Programming: Python, Rust, JavaScript, PHP/Laravel, SQL, Git/GitHub.

ADDITIONAL TRAINING AND INFORMATION

Cisco Networking Academy – CCNA coursework: Introduction to Networks; Switching, Routing, and Wireless Essentials (Feb. 2025); Enterprise Networking, Security, and Automation (Jun. 2025).
Leadership: President of ENSAT Gaming Club since June 2026; team coordination and event planning.
Languages: Arabic (native) · English (professional working proficiency; degree program taught and technical report written in English) · French (good comprehension and writing skills).
